The iHome Multi-Center I

Dual Zones • Dual Drives • Home Server

The iHome Multi-Center I is the first Home Suite product from ADA. It is essentially three components in one: a hard-drive music storage device with two outputs, Media Center PC, and an IP control server for your ADA system.

As a music server, the iHome Multi-Center can store your library of CDs and downloaded music on its massive front panel hard-drive. Using the popular Apple® iTunes® or Microsoft® Media Center® software, you can easily

manage your music library on any PC connected to a home network. A mirror copy of your music is also stored on the second removable hard drive (complete RAID I configuration).

As a home server, the iHome Multi-Center I makes it possible to control your ADA multi-room system from PC's, web tablets and PDA devices using an Internet browser application. An intuitive graphical user interface permits you to operate your system from a myriad of web-centric devices.

The “i” is for...

Integration

The iHome Multi-Center I is uniquely designed to integrate with ADA's numerous multi-room systems and keypads. Using ADA keypads that feature a display, you can select your music by artist, title, playlist and genre, making it easy to play your favorites from any room in the home.

Intelligent

For those who store their music on personal players, like Apple's iPod®, the iHome Multi-Center I offers a permanent “home-base” storage center. So, when you take your player with you, others can still listen to the same playlists through the multi-room ADA system.

The Brand of Excellence

Audio Design Associates, the undisputed founder of custom installation electronics, is recognized as the industry leader when it comes to performance and quality. With over a quarter-century under our belt, ADA defines custom installed luxury.
